

AI Insights and actions

Problem

Customers struggle with buried information.
They have to actively search for meaningful, useful, or urgent information—specifically anomalies (atypical changes) in their key metrics—instead of having these critical events surfaced proactively.

Solution

AI Insights and actions can intelligently monitor their business and automatically bring important anomalies to their attention.

Success

Engagement
(5%, 30% repeat users)

Usefulness
>80%

Product stickiness and reducing churn
5-10%
